PROFESSIONAL SUMMARY

Software Engineer with experience building API-driven integrations and workflow-based automation systems. Skilled in developing and maintaining web applications, integrating services using REST APIs, and designing automation pipelines for structured data flow. Experienced in debugging request-response issues, resolving API failures, and improving application performance. Familiar with deployment workflows using Docker and Vercel. Exposure to AI-assisted development tools including Cursor AI.

SKILLS

Languages: JavaScript, Python

Integration & APIs: RESTful APIs, API Integration, Request-Response Debugging

Automation: Workflow Automation (n8n), API Pipelines

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Databases: MongoDB, SQL

DevOps: Docker (basic), Vercel Deployment

Concepts: System Integration, Event-based Workflows (basic), Performance Optimization

Tools: Git, GitHub, Linux

AI Tools: Cursor AI, OpenAI Codex, Claude Code

EXPERIENCE

Full stack developer

Geekonomy Technology, Bengaluru

Apr 2026 – Present

- Developed and maintained web applications integrating frontend systems with backend services using RESTful APIs
- Designed API-driven integrations for CRM workflows, enabling structured data flow across modules handling 1000+ records
- Built workflow-oriented features connecting frontend interfaces with backend services for task and client management
- Debugged request-response issues including API failures, incorrect payload handling, and data inconsistencies across systems
- Improved application responsiveness by resolving performance bottlenecks (15-20% improvement)
- Deployed frontend applications using Vercel and worked with containerized environments using Docker (basic)
- Collaborated in Agile environment using Git, pull requests, and code reviews

Full Stack Developer Intern

Geekonomy Technology, Bengaluru

Oct 2025 – Mar 2026

- Contributed to development of web applications with focus on API integration and frontend-backend connectivity
- Supported debugging of API and UI issues, improving data flow consistency across modules
- Built reusable components and assisted in implementing structured data workflows
- Participated in Agile development workflows and team collaboration

Deep Learning Research Intern

DRDO (CABS), Bengaluru

Oct 2024 – Nov 2024

- Developed data processing and model training pipelines for aircraft detection
- Trained models on ~3000 images achieving ~95% validation accuracy
- Built reproducible workflows for experimentation and evaluation

PROJECTS

YouTube Video Automation System (n8n)

- Designed and implemented multi-step automated workflows integrating multiple APIs for content generation and publishing
- Built end-to-end pipelines handling data fetching, transformation, and execution with sequential task dependencies
- Implemented workflow logic to manage automated processes and ensure consistent data flow across services
- Used AI-assisted tools to improve automation efficiency and reduce manual intervention

YouTube Comment Analyzer

- Built system to process and analyze user comments using Python and NLP techniques
- Generated structured insights from text data through classification workflows

EDUCATION

B.E. Computer Science & Engineering

Visvesvaraya Technological University

CGPA: 7.93

Jul 2025
